Today: work through worksheet 5

If you finish that, you should:

- Work through homework 5
 (are you sure it's correct? Check with a demonstrator / Hannah / Philip)
- Try implementing your solutions in Python or Java or a new programming language for you (e.g. Rust)
- 3. Either try reading one of the suggested textbooks (see part1 of the slides) or check out the extension questions on Padlet or do the extra algorithms practice we started last week (available on both Canvas and Padlet week 3-4)
